

## Cytronex C1 Compatability Bottle Cage Template

Please print this template onto a standard sheet of A4 selecting "Actual Size" and check the 242mm dimension with a ruler before aligning with the bottle cage bolt positions on the downtube of your bike, to check for clearance.

Ideally you will use Position 1 to mount the Cytronex Cage to the two bolt holes on the downtube of your bike – if the template indicates there is not enough clearance then try position 2. If neither fit (but otherwise your bike is compatible) then please contact Cytronex for other options.
